COM	PLETE			POSTERI	OR - DARK PU	RPLE		COOL

The body is that of a well developed, well nourished, white female clad in a pair of multicolored checked shorts. Accompanying the body is a blue tank top, which has been cut from the body. Multiple emergency medical interventions are present on the body which are diagramed on the Included CME-1B2 series form. Eyes are clear and show no petechiae. Dentition is natural, intact and unremarkable as is oral mucosa. Blackish-brown vomitus is in the mouth and stains the face. Neck, chest, abdomen and back appear intact and unremarkable Arms, hands, legs, and feet show no acute injury. On the palmar aspect of the right wrist, there are two old scars. One is horizontal and approximately 1.0 in. in length and the other is somewhat curvilinear at approximately 1/2 in. In length. Hands are otherwise intact and unremarkable. Anal and genital regions appear intact and unremarkable.

Multiple professional style tattoos are present on both feet, as well as on the posterior aspect of the left shoulder and these are diagramed on the included CME-1B2 series form. There is also a professional style tattoo in the right inguinal area that consists of a winged fairy and a star.

FULL BODY, FEMALE - ANTERIOR AND POSTERIOR VIEWS

Name PLATE, PLOR CME-182 (Series 1978) Case No. 990 204 3 262 .94

INTERNAL EXAMINATION

AUTOPSY NO. ML 282-99

CASE NO. 9902043

The body is opened through the usual "Y" shaped incision and the chest plate is removed in the usual manner showing the internal organs to be in their normal position and relationship with no abnormal effusions seen in the chest, pericardial sac or abdomen.

ORAL AND NECK ORGANS:

The tongue appears intact and unremarkable. Epiglottis, glottis, and alrway are normally formed, widely patent and unremarkable. Soft tissues and cartilaginous structures of the neck are intact and unremarkable. There is aspiration of small amount of vomitus into the trachea.

HEART:

240 gm, normally located, normally formed, intact, and grossly within normal limits externally with normal origin and distribution of great vessels and coronary arteries. Coronary arteries are widely patent throughout and show no evidence of significant disease. On cut section, the myocardium is of normal color, consistency, and thickness and show no evidence of injury or disease. The endocardium and heart valves are unremarkable. Coronary ostia are normally located and widely patent. Thoracic and abdominal aortas are grossly within normal limits.

LUNGS:

Right lung weighs 700 gm and the left lung weighs 600 gm. Except for edema and congestion, they show no evidence of injury or disease and appear within normal limits.

G.I. TRACT:

The esophagus, stomach, duodenum, small intestines, large intestines and appendix are all intact and unremarkable on external and cut section exam. The stomach contains a measured quantity of 150 cc of brownish-black liquid with similar material seen in the duodenum. Remainder of intestines contain normal quantities of fecal material, although the distal colon is relatively free of stool.

SPLEEN:

150 gm, intact, and grossly within normal limits externally and on cut section.

Internal - 2 Case No. 9902043

PANCREAS:

Grossly within normal limits.

LIVER:

1800 gm, intact, and unremarkable with a normal gallbladder attached.

ADRENAL GLANDS:

Bilaterally similar and grossly within normal limits.

KIDNEYS:

100 gm each, bilaterally similar and grossly within normal limits. Normal ureters are present ending in a normal bladder that contains a measured quantity of 120 cc of clear, yellow urine.

REPRODUCTIVE ORGANS:

Bilateral adnexa, uterus, cervix and vagina are intact and unremarkable. The endometrium is intact and unremarkable.

CNS:

The scalp is reflected in the usual manner and shows no underlying injury. The calvarium is intact and unremarkable. Removal of the calvarium shows the meninges to be clear, intact, and unremarkable with no evidence of intracranial hemorrhage or infection. Brain is normally formed, weighs 1350 gm and has normal origin and distribution of cerebrovasculature and cranial nerves. Externally and on cut section, it shows normal architecture with no evidence of injury or disease. The brain stem, upper cervical cord, and cerebellum are all intact and unremarkable.

SKELETAL:

The base of the skull, spine, ribs, pelvis, and long bones of extremities including scapulae, clavicles, and sternum appear intact and unremarkable by palpation and by visual exam where possible. Bone marrow is within normal limits. Nasal bones, facial bones, and mandible appear intact and unremarkable by palpation.

MICROSCOPIC EXAMINATION

AUTOPSY NO. 282-99

CASE NO. 9902043

Because no significant natural disease was found and because the history is such that this appears to be a drug overdose, no histology will be done except to embed tissues for microscopic exam at a later date if necessary.
