AUTOPSY REPORT

-3-

MAXFIELD SHACKNAI 11-1542

and when his pulse was regained 25 – 30 minutes later resulted in irreversible damage to his brain, which ultimately led to his death five days later.

Toxicological testing detected of blood drawn during admission to the hospital revealed a presumptive positive benzodiazepines screen, but this was not confirmed. No illicit drugs, other medications, or alcohol was detected.

Therefore, based on these findings and the history and circumstances of the death as currently known, the cause of death is certified as **anoxic/ischemic encephalopathy due to resuscitated cardiopulmonary arrest due to cervical spinal cord contusion due to blunt force trauma of head and neck**, and the manner as **accident**.

JONATHAN R. LUCAS, M.D.
Deputy Medical Examiner
